Martin Alain	17	Х	Х	×			X	X	Х			Х	Х	Х			Х	Х			Х	Х		х	х	Х		Х	Х
Yayaoui Pierre	11	9.2		370	Х				х	х			Х	х			х		х	х		х	1		Х	х	3 2		Х

Remarques:

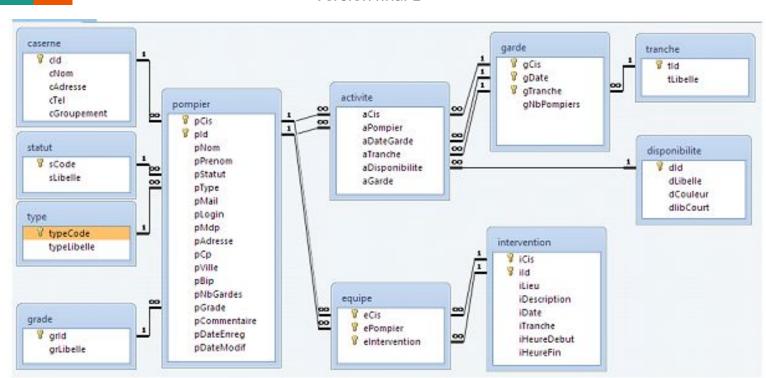

Chaque case correspond à une tranche horaire d'un jour de la semaine :

- Une case blanche signifie que le volontaire est disponible pour cette tranche.
- Une case hachurée signifie que le volontaire est au travail pendant cette tranche.
- Une case pleine signifie que le volontaire est indisponible pendant cette tranche.
- Une croix indique que le volontaire a été désigné de garde pour cette tranche horaire.

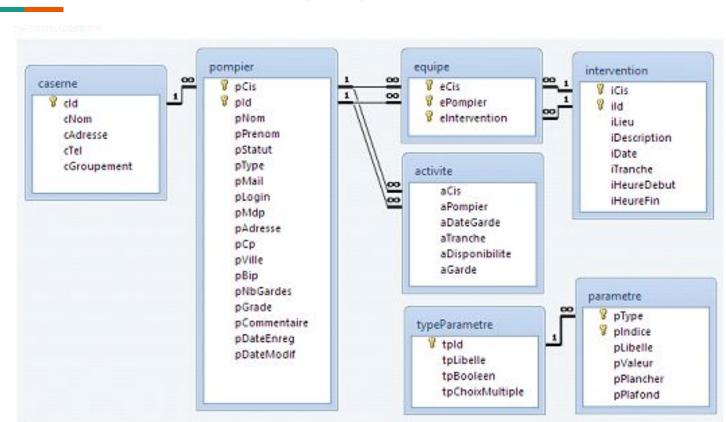

Exemples pour le lundi 17/10:

- Durand François est disponible pour les quatre tranches horaires. Il est de garde pour les tranches 2 et 3.
- Legall Yasmina est au travail pour les tranches horaires 2, 3 et 4. Elle est de garde pour les tranches 1 et 4.
- Dubois Yves est indisponible pour les quatre tranches horaires, il n'est donc pas de garde pour cette journée

Modèle Logique de Données Relationnel

Modèle Logique de Données Relationnel

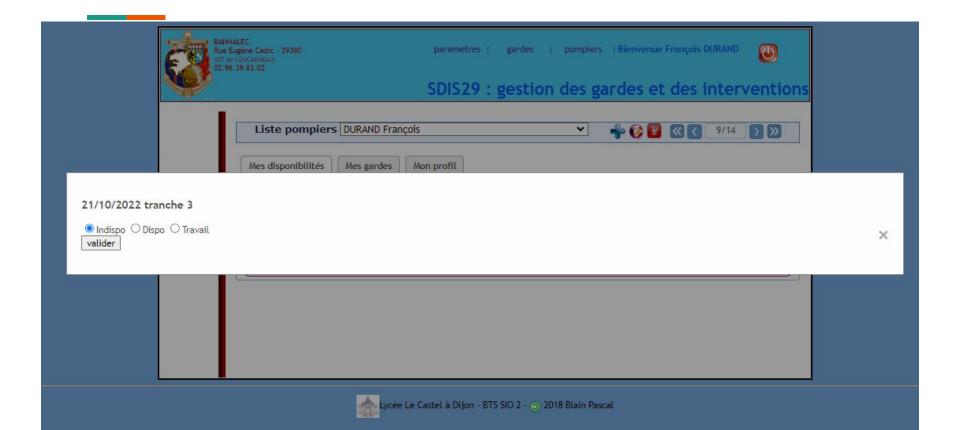

Partie Développeur

Mission 1: Gestion de profil

Mission 2 : Gestion de la feuille de garde

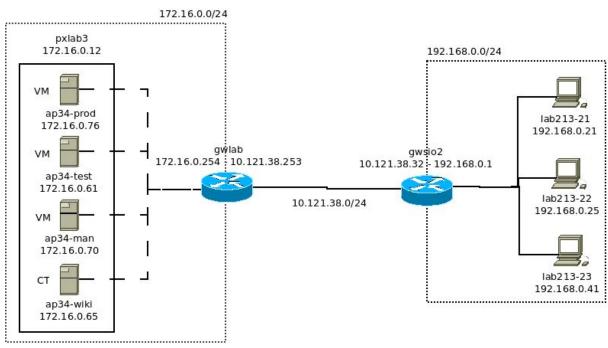

Partie Réseaux

Les serveurs:

- Serveur de Production (ap34-prod)
- Serveur de Test (ap34-test)
- Serveur de Supervision (ap34-mon)
- Serveur dokuwiki (ap34-wiki)
- Serveur de backup (MV Virtualbox)

Schéma réseau:

Sur tous les serveurs :

- clé ssl
- dpkg-reconfigure tzdata
- vim /etc/profile.d/proxy.sh:
- # configuration proxy
- export http_proxy "http://10.121.38.1:8080"
- export https_proxy "http://10.121.38.1:8080"
- export no_proxy "127.0.0.1,localhost"

Sur le serveur de Production et de Test :

- apt install gemu-guest-agent apache2 mariadb-server php adminer -y
- In -s /usr/share/adminer/adminer /var/www/html/adminer (uniquement sur ap34-test)
- Serveur de backup (MV Virtualbox)

```
Base de donnés:
```

mysql_secure_installation

mariadb> create database sdis;

mariadb> create user 'sio'@'%' identified by 'sio';

mariadb> GRANT ALL PRIVILEGES ON sdis.* TO 'sio'@'%';

Mission 2 - Supervision: Nagios

Qu'est ce que nagios?

Un logiciel qui surveille les systèmes, les réseaux et l'infrastructure. Nagios offre des services de surveillance et d'alerte pour les serveurs, les commutateurs, les applications et les services

Installation nagios

Apt install nagios 4 sur ap34-mon

```
http://ap34-mon/nagios4/

nom d'utilisateur nagiosadmin

Mdp: A******

Supervision sur les ap34-prod et ap34-test

On a créé les différents hosts qu'on va superviser

cd /etc/nagios4/objetcs/# ls
```

ap34-prod

ap34-prod.cfg

hostgroup

nano localhost.cfg

```
define hostgroup {

hostgroup_name linux-servers ; The name of the hostgroup
alias Linux Servers ; Long name of the group
members localhost, ap34-prod, ap34-test, gwsio2, gwlab, pxlab3, px, ; Comma separated list
}
```

localhost.cfg

```
define service {
                           local-service
                                                   ; Name of service template to use
   use
   hostgroup name
                           servers-web
    service description
                           HTTP
    check command
                           check http
   notifications enabled
define service {
                           generic-service ;Use generic-service template
   use
                                    ; S'applique au groupe en question
   hostgroup name
                           ap34
                            check-lin-load; Nom du service
    service description
                            check lin load!public!--v2c!netsl!3,2,2!3,2,2 ; Command
    check command
```

Command.cfg

apt install-plugins-nagios
/etc/nagios4/objects#

nano commande.cfg

Mission 3 - Rsyslog

Sur le serveur ap34-mon :

```
vim /etc/rsyslog.conf
...
module(load="imudp")
input(type="imudp" port="514")
...
```

Mission 3 - Rsyslog

Script d'archivage des logs.

Mission 3 - Rsyslog

...

Sur les postes clients (ap34-prod, ap34-test):

```
vim /etc/systemd/journald.conf
...
ForwardToSyslog=yes
vim /etc/rsyslog.conf
*.* @172.16.0.70:514
```

Certificat SSL auto-signé:

sudo a2enmod ssl

sudo systematl restart apache2

sudo openssl req -x509 -nodes -days 365 -newkey rsa:2048 -keyout /etc/ssl/private/apache-selfsigned.key -out /etc/ssl/certs/apache-selfsigned.crt

```
Country Name (2 letter code) [AU]:FR
State or Province Name (full name) [Some-State]:Bourgogne-Franche-Comté
Locality Name (eg, city) []:Dijon
Organization Name (eg, company) [Internet Widgits Pty Ltd]:SDIS29
Organizational Unit Name (eg, section) []:
Common Name (e.g. server FQDN or YOUR name) []:ap34
Email Address []:ap34@localhost
```

001-default-ssl.conf:

vim /etc/apache2/sites-available/001-default-ssl.conf

```
ServerName 172.16.0.61
DocumentRoot /var/www/html

ErrorLog ${APACHE_LOG_DIR}/error.log
CustomLog ${APACHE_LOG_DIR}/access.log combined

SSLEngine on
SSLCertificateFile /etc/ssl/certs/apache-selfsigned.crt
SSLCertificateKeyFile /etc/ssl/private/apache-selfsigned.key

</VirtualHost>
```

sudo a2ensite 001-default-ssl.conf sudo systemctl reload apache2

000-default.conf:

vim /etc/apache2/sites-available/000-default.conf

```
